

How to create a repository

custom 4 steps · 31s

1 Click 'New' to create a repository.

The screenshot shows the GitHub Dashboard for a user named 'mctata'. The interface includes a top navigation bar with a search bar and various icons. On the left sidebar, under 'Top repositories', a green 'New' button is highlighted with a red box. The main content area is titled 'Home' and features a search bar, a list of actions (Ask, Task, Create issue, Write code, Git, Pull requests), and a notification about being added to the 'landingpad-digital' organization. Below this is a 'Feed' section showing recent activity, including a repository star by 'tomlane' and a release by 'openclaw/openclaw'. On the right, a 'Latest from our changelog' section lists recent updates.

2 Type repository name in the name field.

New repository

Q Type to search

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).
Required fields are marked with an asterisk (*).

1

General

Owner *

mctata

Repository name *

Great repository names are short and memorable. How about [expert-doodle](#)?

Description

0 / 350 characters

2

Configuration

Choose visibility *

Choose who can see and commit to this repository

Public

Start with a template

Templates pre-configure your repository with files.

No template

Add README

READMEs can be used as longer descriptions. [About READMEs](#)

Off

Add .gitignore

.gitignore tells git which files not to track. [About ignoring files](#)

No .gitignore

Add license

No license

3 Scroll down to find the Create repository button.
